ROYAL LABS | PRIVATE LABEL & CONTRACT MANUFACTURING

THE PROTECTION THEY NEED.
THE FINISH THEY'LL LOVE.

TINTED MINERAL SUNSCREEN SPF 50

High-performance mineral protection. Prestige skincare ingredients. A new opportunity for your brand.

MEET THE NEW STANDARD IN MINERAL SUNCARE

Royal Labs brings together 25% Zinc Oxide and an elevated skincare complex in a tinted daily sunscreen designed for the modern beauty consumer. This sophisticated formulation combines mineral UV protection with moisturizing, skin-conditioning ingredients and complexion-enhancing iron oxide pigments.

NOT JUST ANOTHER MINERAL SUNSCREEN.

At the maximum permitted OTC concentration of 25%, Zinc Oxide anchors a mineral-only active system. Ceramide NP, squalane, niacinamide and hyaluronic acid give brands a compelling premium skincare story, while iron oxide pigments help soften the appearance of the traditional mineral white cast. A 14-shade collection offers a versatile launch platform.

THE FORMULA STORY

25% ZINC OXIDE	Mineral-only sunscreen active for SPF 50 positioning; broad-spectrum claims subject to finished-product testing.
CERAMIDE NP + SQUALANE	Premium skin-conditioning lipids for barrier-focused skincare positioning.
NIACINAMIDE + HYALURONIC ACID	A sought-after combination supporting hydration and a smoother-looking complexion.
PANTHENOL + SOOTHING BOTANICALS	Panthenol, bisabolol, aloe and allantoin complement daily skin comfort.
IRON OXIDE TINTS	Complexion-enhancing pigments in a planned 14-shade collection.

YOUR NEXT HERO SPF STARTS HERE.

Give your customers a premium tinted mineral sunscreen with a skincare-first story. YOUR BRAND. OUR INNOVATION. Discover how Royal Labs can bring this formulation to market under your own brand. Request product information, pricing and packaging options.
